

## Skeleton pane

- Will have a Nav and Footer that on desktop is consistent and fixed on all pages. On mobile the footer will always be on each page but the full nav bar including the logo will disappear when you scroll. Expect the toggle down to navigate to other pages.
- The main body on the homepage will be split into 3 sections.
- On every other page there will just be 2 sections. The main content in the largest and the enquiry form in a smaller section above the footer.

Below are my wireframes for desktop and mobile...
